

Azure Data Factory Project

Conditional File Routing Pipeline with Get Metadata, ForEach & If Condition

Tool	Azure Data Factory (ADF) + Azure Blob Storage
Pipeline logic	Get Metadata fi ForEach fi If Condition fi Copy Data
Condition used	Get Metadata fi ForEach fi If Condition fi Copy Data contains(item().name, 'temp')
Outcome	Files with 'temp' fi output1 Other files fi output2

Step 1: Resource Group Overview

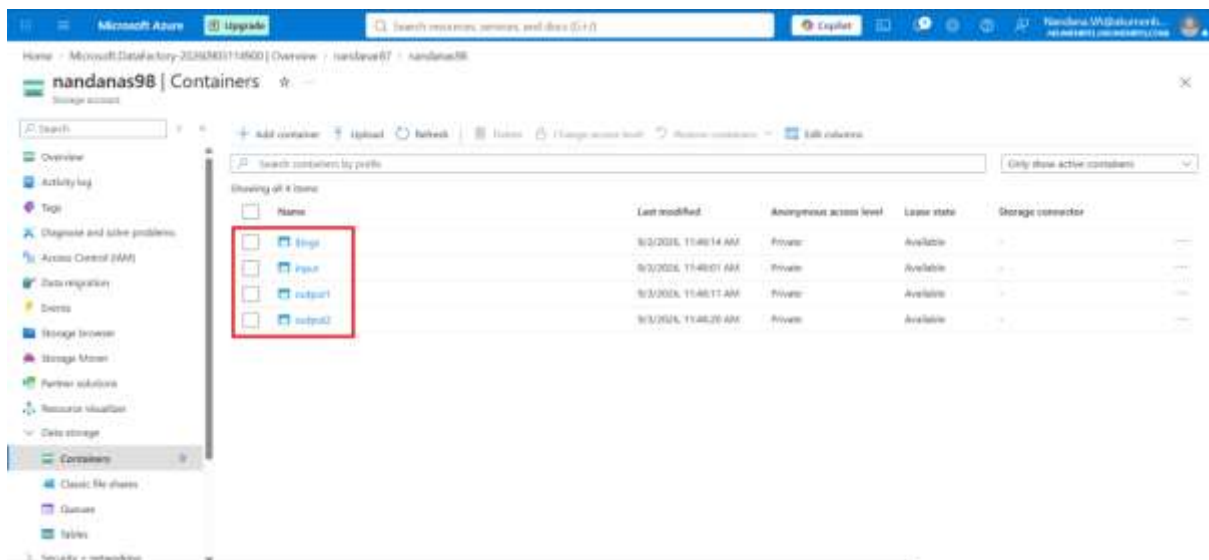

- Resource group created
- Storage account and Data factory is created in Resource group

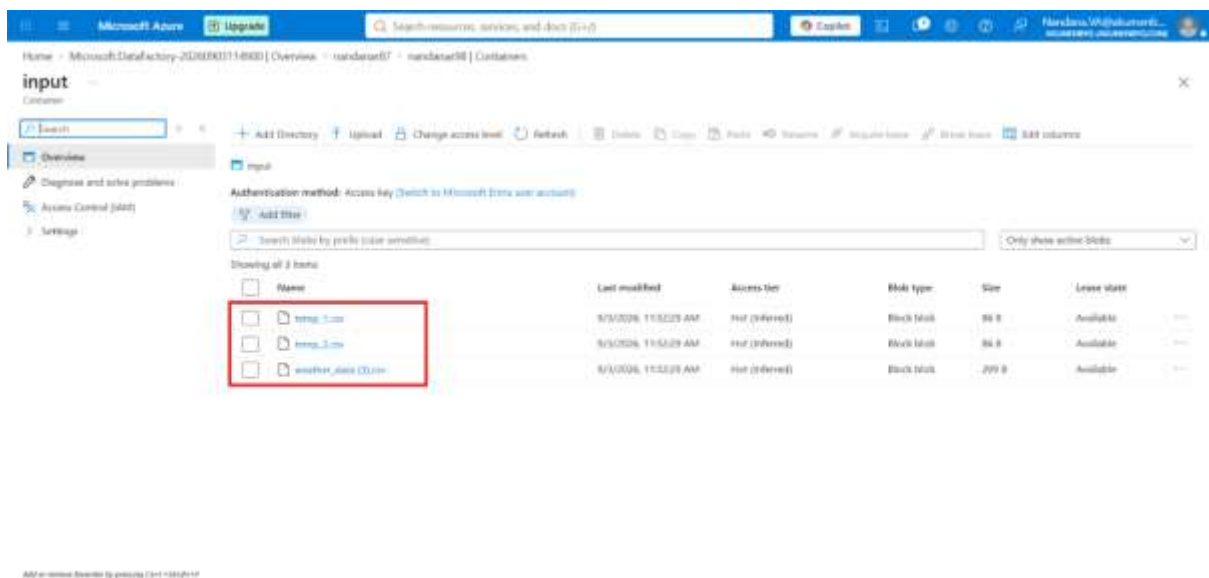

Step 2: Storage Containers

In Storage account 3 containers are created:

1. Input
2. output1
3. output2

Files uploaded in input container

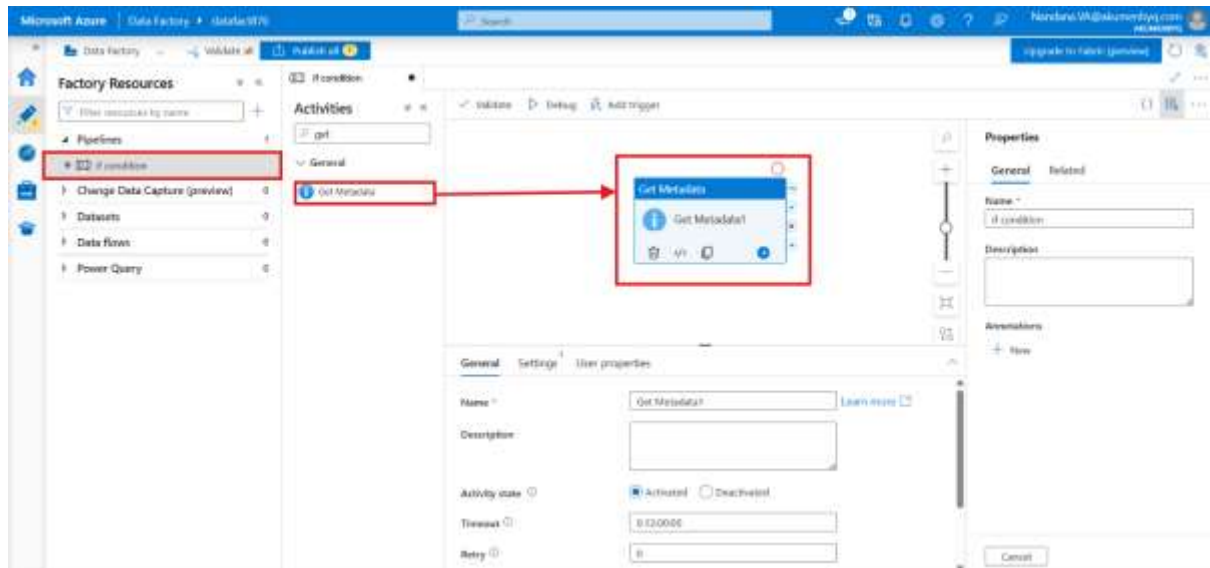

Step 3: Create Pipeline + Get Metadata

Launched Data factory

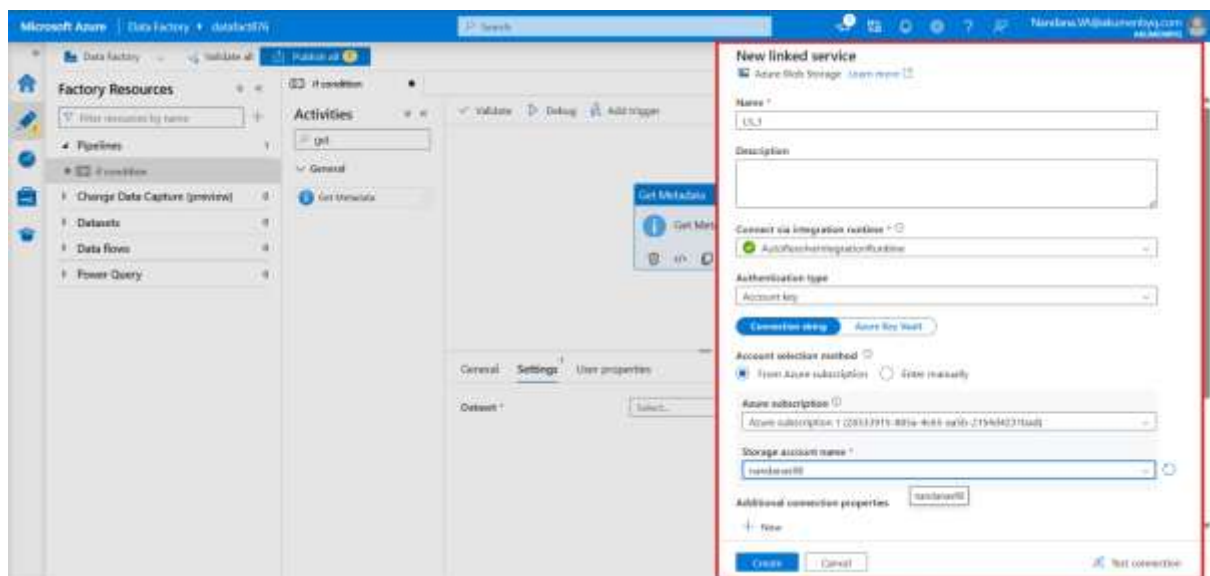

New pipeline is created; Author -> Pipeline -> New pipeline

Getmetadata is selected from activities and dragged into the panel

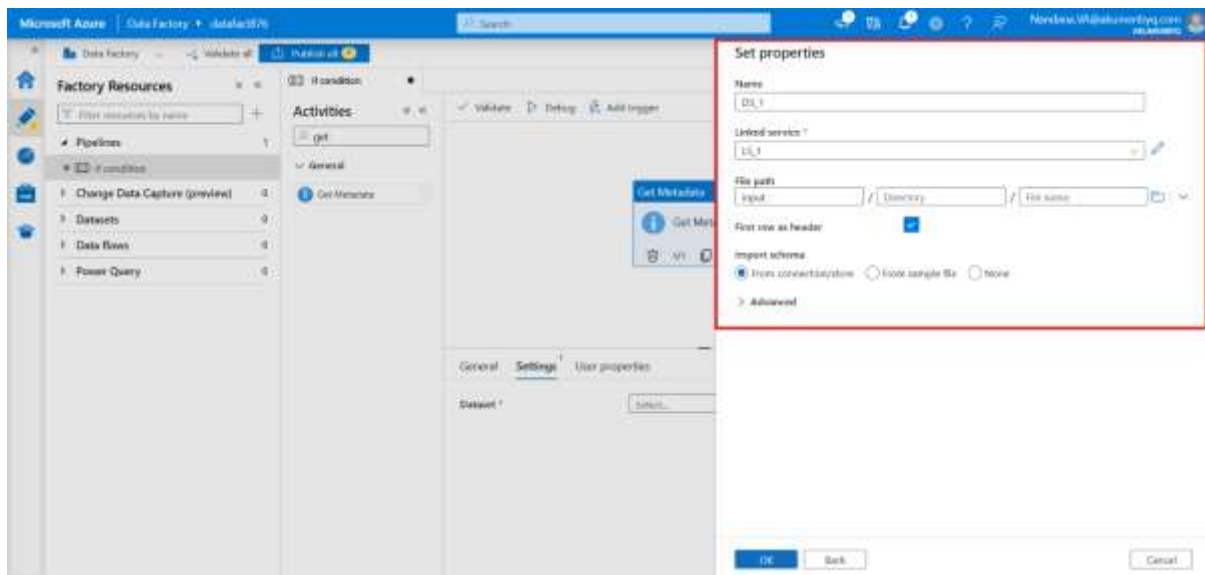

Step 4: Connect to Storage (Linked Service)

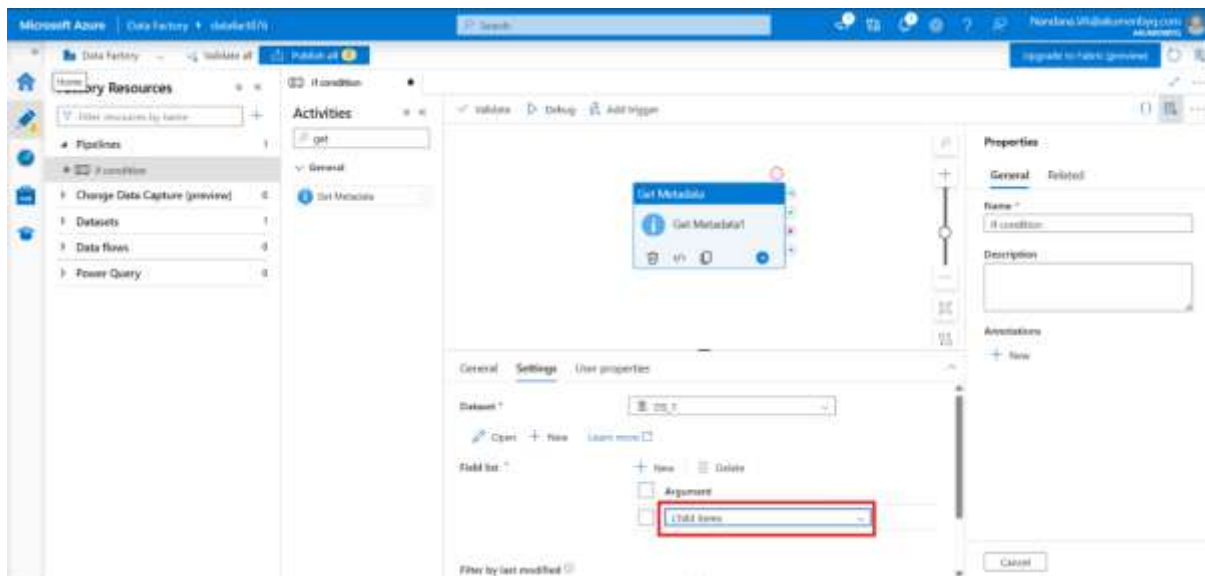

In settings, new Dataset and Linked Service is created

Step 5: Set the Input Dataset

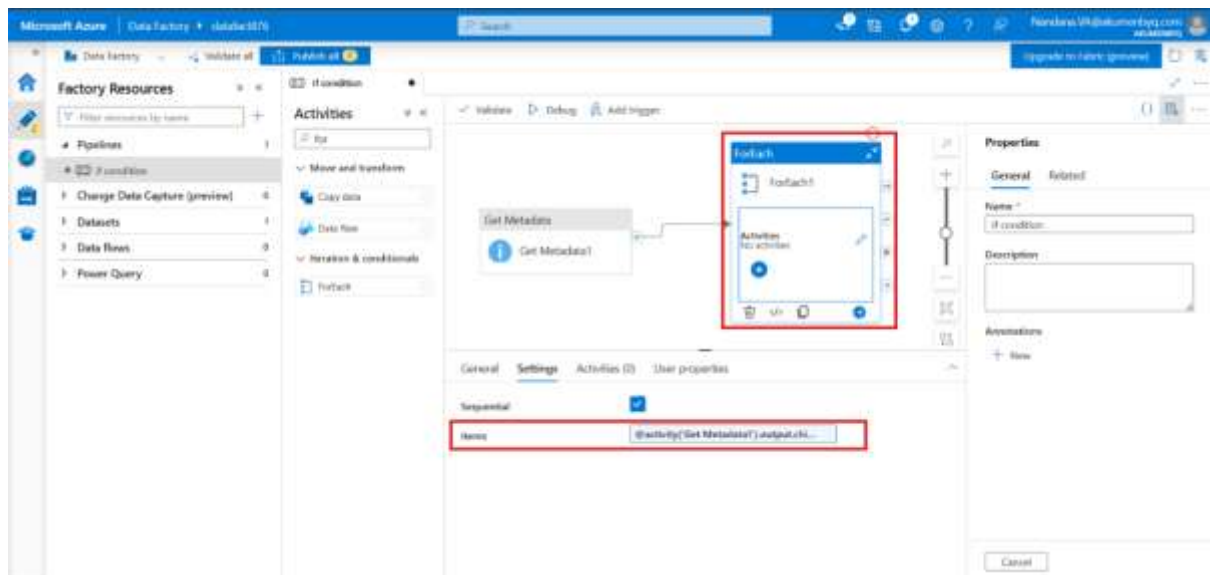

set child items in field list

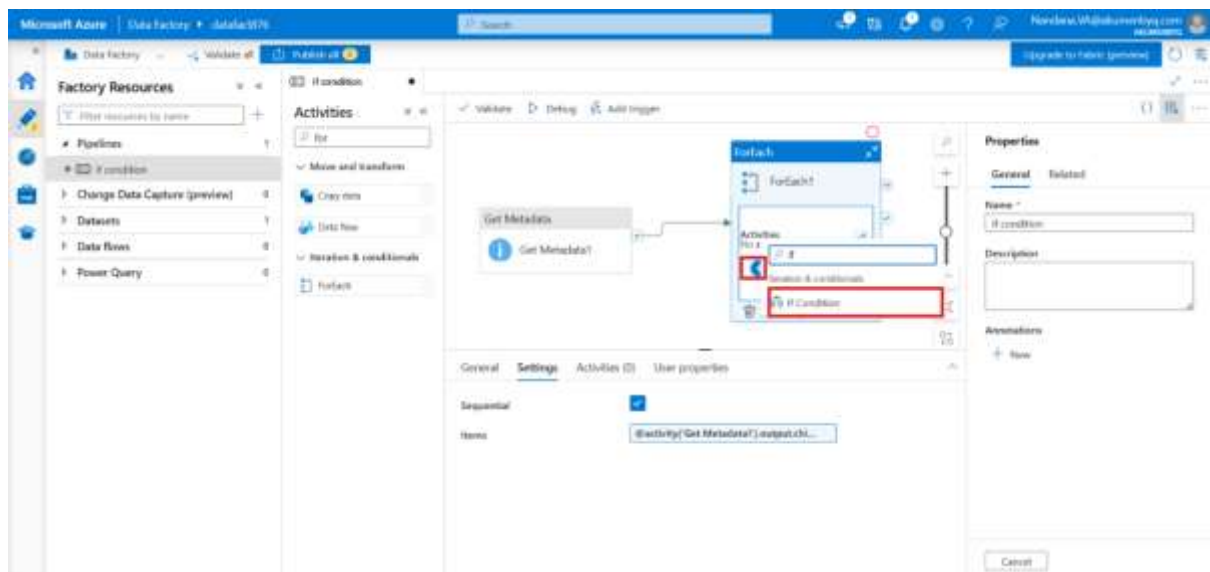

Step 7: Add ForEach Loop

ForEach is selected from activities and dragged into panel

Made a connection between getmetadata and ForEach

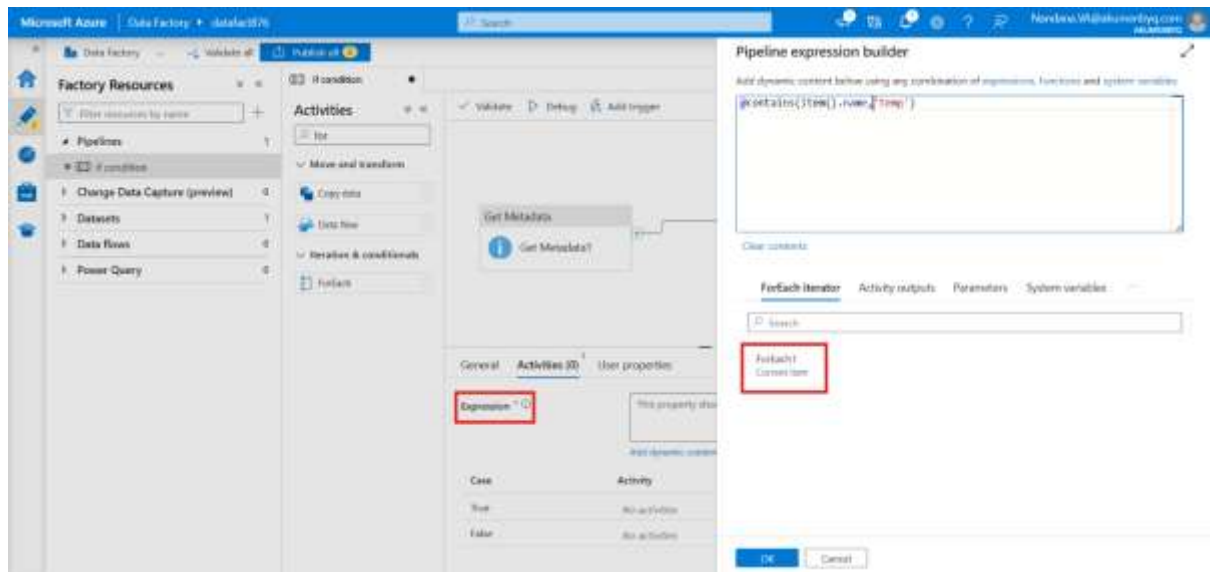

Step 8: Add If Condition Inside the Loop

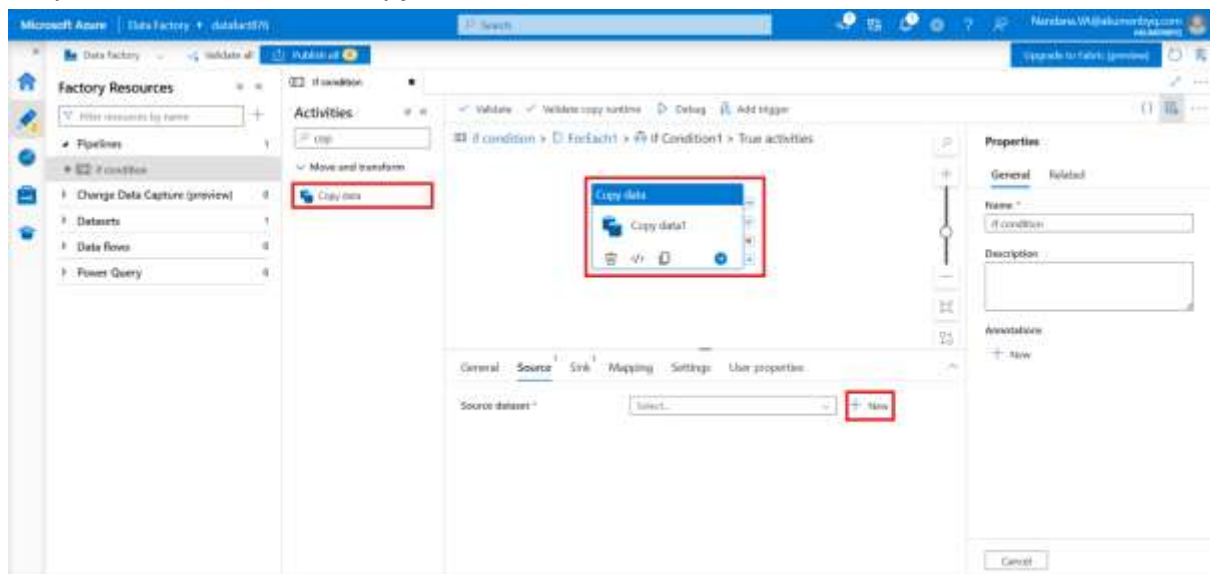

Step 9: Set the Condition

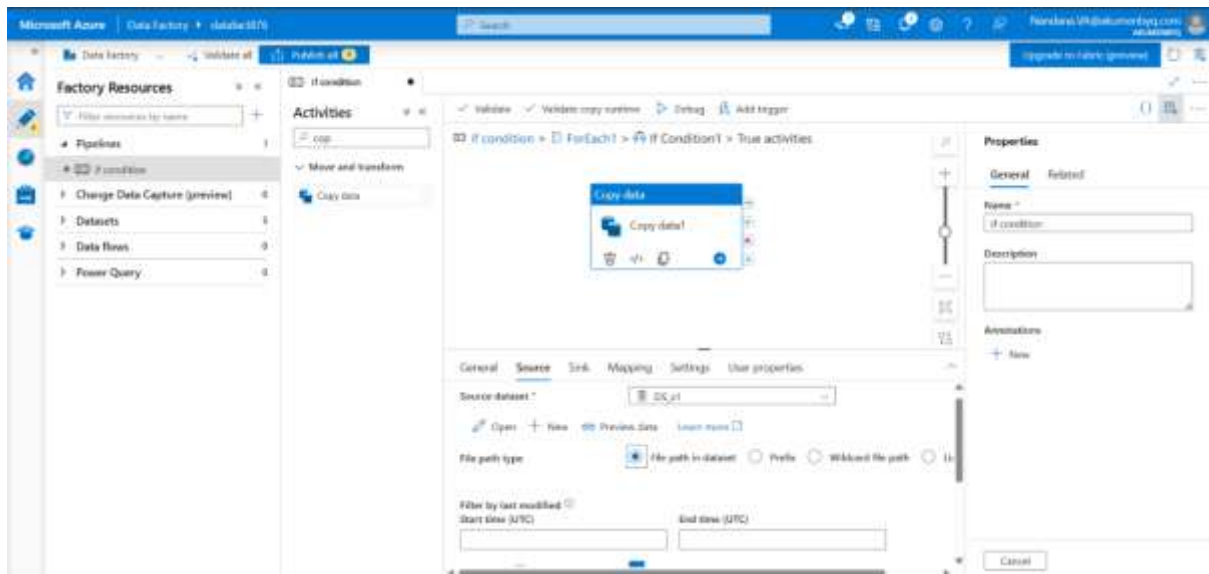

By adding the dynamic content, expression is configured

Step 10: True Side – Add Copy Data

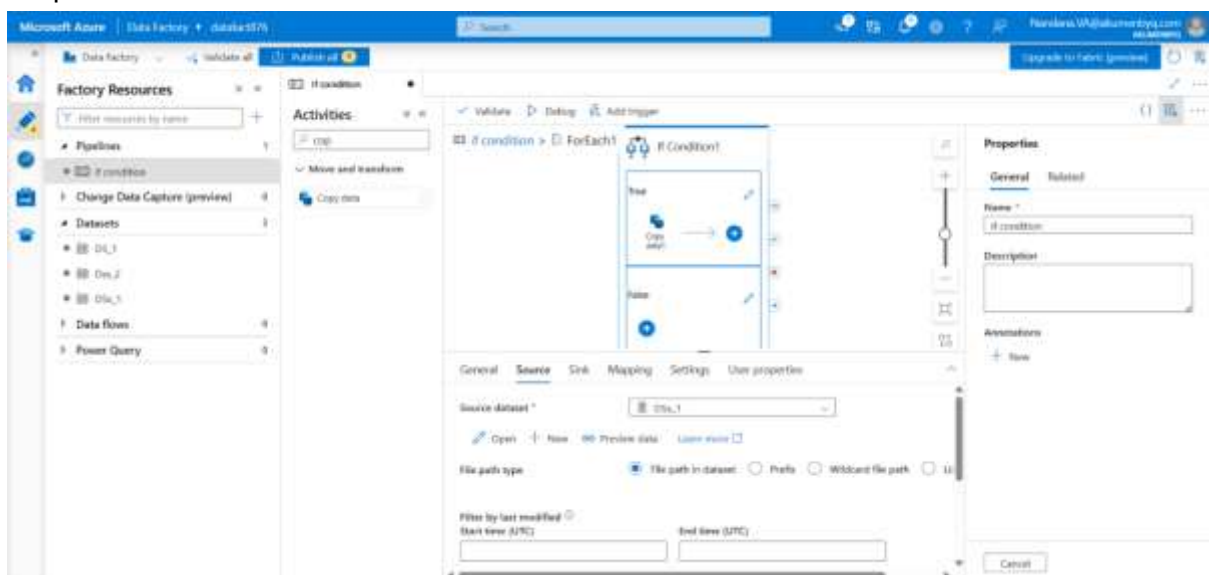

Step 11: Set Source for Copy data1

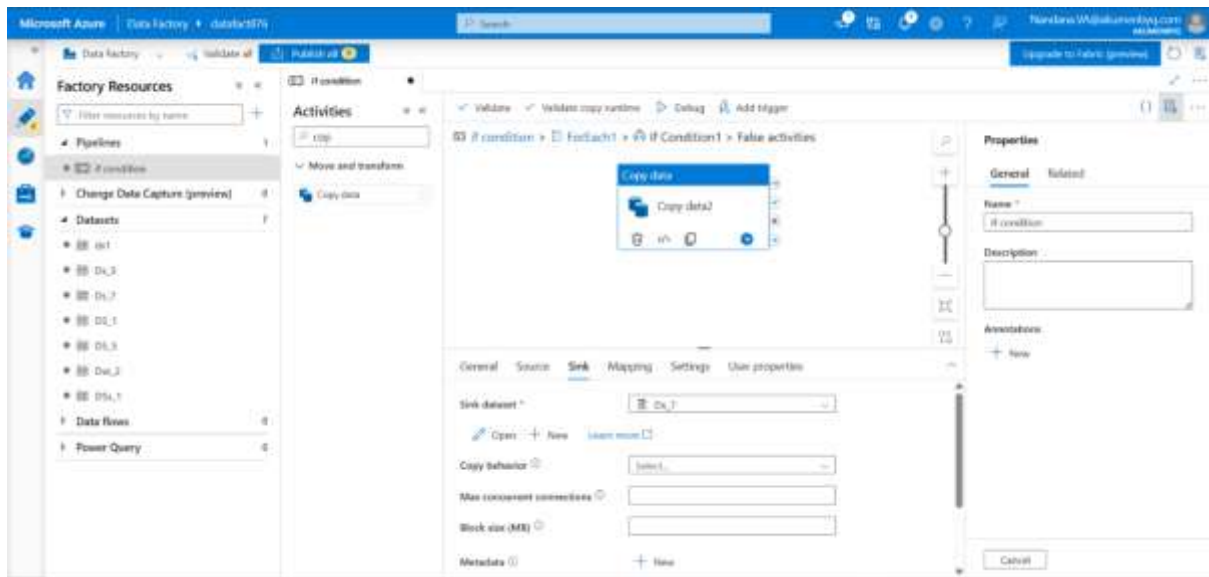

Copy data1 is set to read the current file from the input folder using dataset DS_s1.

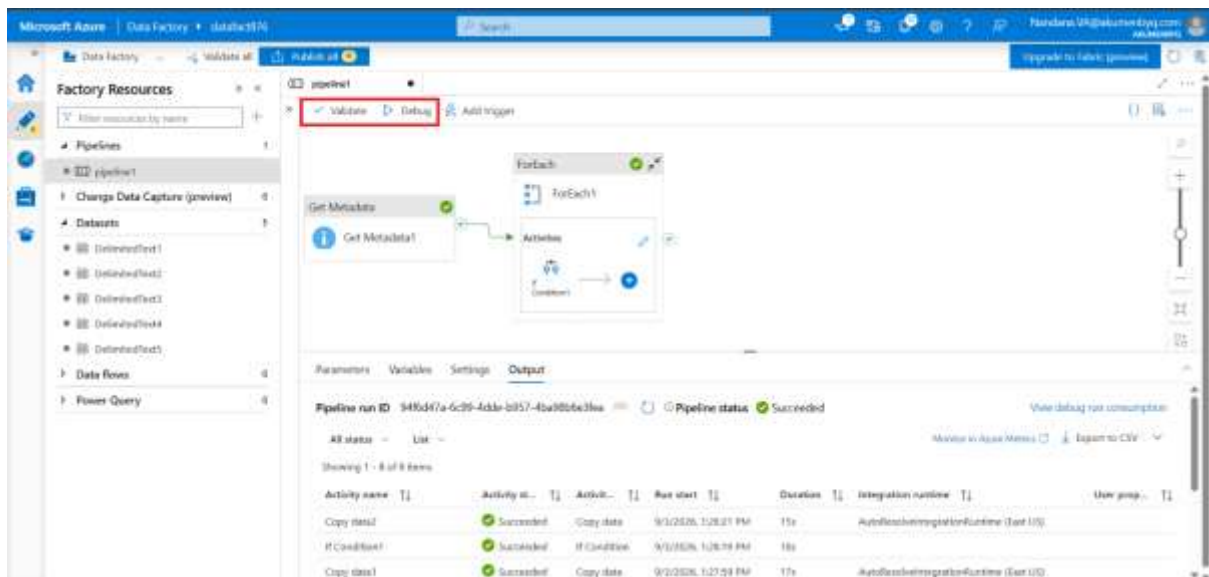

Step 12: True and False Branches

Step 13: False Side – Add Copy Data

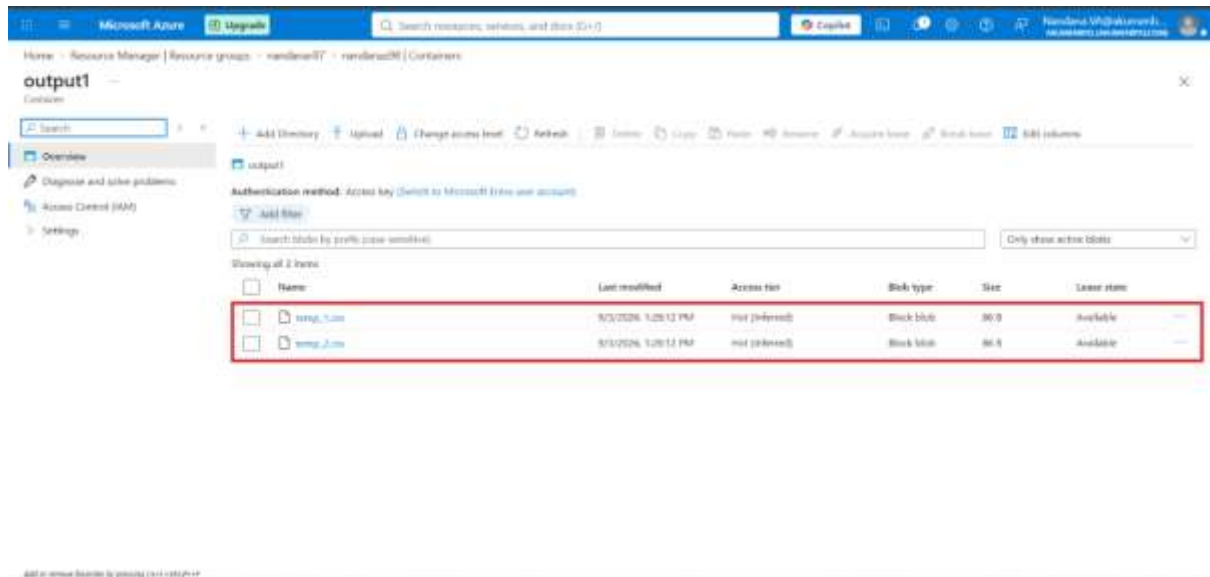

Validation and Debugging Succeeded

Step 15: Check Output1 Folder Step

As Result, the temp files are copied to output1 container
